

Single Skin Steel Partitioning modular and flexible.

Offering a lightweight yet durable solution for a workplace.

The Sigma system is ideal for factory or warehouse environments. It is perfect for enclosing working areas where appearance is important but a double skin system is not necessary, making our Sigma range a very popular economic solution.

Sigma is also widely used for enclosing paint lines and coating furnaces, and allows easy access for maintenance. It can also be combined with our Elan range providing flexible working environments.

In a multi-tiered application, it can be used as factory or warehouse division for security, dust-proofing and environment control. Other applications include perimeter guarding to automated machinery, robots, conveyors, and for other automated processes.
