Redirack Pallet Racking

British manufactured pallet racking - less on-site assembly time, reduced maintenance and increased reliability

Applications:

Pallet racking can be arranged in a number of different configurations, depending upon your storage, speed of throughput and stock accessibility requirements:

Wide aisle pallet racking is the most widely used system for storing palletised unit loads.

Narrow aisle pallet racking systems have an aisle width of around 1.6 metres. This can free up to 45% of the floor space given over to aisles in a wide aisle scheme.

Double deep pallet racking stores 2 pallets deep or 4 pallets deep between aisles. It delivers increased storage density when compared to wide aisle and requires specialised fork lift trucks.

Drive-in pallet racking is a good solution if storage capacity is a prime requirement of your warehouse.

Cranes within a pallet racking system enables the aisle width to be reduced significantly, down to 1300mm in some cases.

Powered mobile pallet racking features pallet racking fixed to bases which move electrically. Powered mobile racking maximises space utilisation, enabling up to 80% of the floor area to be occupied for storage.

Push Back pallet racking is a product that combines the benefits of drive-in racking with pallet live storage.

Accessories:

Our extensive range of accessories can turn our pallet racking into a wonderfully versatile storage medium for a whole range of products.

Choose from drop over panels, coil cradles, safety bars, fork clearance bars and wooden decking and you will be able to store almost anything within a Redirack pallet racking system.

Key to Accessories

1. Rack Stabiliser
2. Run Spacer
3. Cantilever Sprinkler Support
4. Pallet Safety Bar with Saddle Bracket
5. Drop Over Panel
6. Barrel Chock
7. Fork Clearance Bars

Redibuild Industrial and Commercial Buildings

Having originally been an innovative solution provider to add to the Redirack Group of Companies holistic solution approach, Redibuild now also works as an independent turnkey commercial building contractor.

Applying excellent project management, Redibuild has the flexibility and skills base to carry out both competitive and negotiated contract work. Redibuild offers a complete "Design & Build" service – handover the land and we'll give you back a fully operational building. Having substantial experience as a company we are able to recommend experts throughout the UK and consider ourselves a truly national provider. We pride ourselves on our expertise and professionalism and expect the same of all the contractors we work with.

The Redirack Group of Companies

The Redirack Group of Companies' holistic solution approach offers clients a single-source for distribution and commercial facility visualisation, design and procurement.

Redifit offers interior contracts, specialising in refurbishment and fit-out services as an upgrade of your premises, or alternatively as a new build.

Redibuild offers a complete "Design & Build" service – handover the land and we'll give you back a fully operational building.

Don't just take our word for it...

The Redirack Group of Companies has an excellent reputation built over many years working with some of our best known companies:

Honda's Tony Pidgeon explains why they chose Redirack: "Redirack was extremely flexible in its approach to this project. We needed delivery and completion within a very tight timescale, which they achieved - and while they were on site they were very accommodating. At Honda we consider after sales service to be a key consideration and Redirack has performed exceptionally well."

Dave Barker of AstraZeneca commented: "By listening carefully to our brief Redirack came up with a great solution. They provided an excellent service from planning through to implementation. Our innovative solution has resulted in massive efficiency gains."

Chris Palmer of Motorola confirmed: "Redirack met our installation schedule exactly and were flexible in coping with last-minute installation changes."

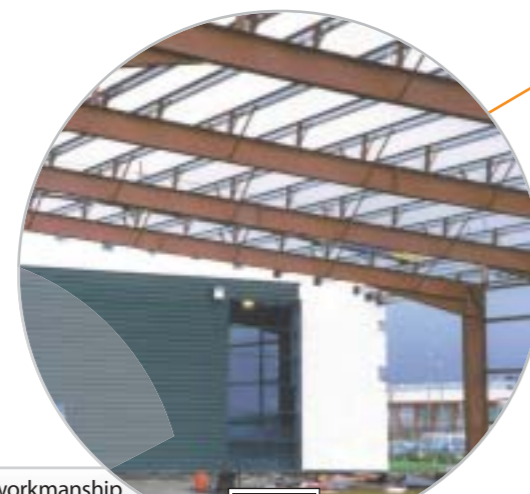

"Redirack performed extremely well. On a project of this scale, flexibility and cooperation are key ingredients. They were able to adapt their installation schedule to accommodate changes to the overall build programme and liaise closely with other suppliers to ensure that deadlines were achieved." Mark Hamilton Kellogg Project Manager.

Redirack pallet racking is unique. Its welded construction means less on-site assembly time, reduced maintenance and increased reliability when compared with pallet racking having a bolted construction.

Redifit offers warehouse fit-out services to compliment any storage system installation. Specialist services include the design, supply and installation of lighting and in-rack sprinklers.

Redibuild provides quality workmanship and value for money. Our large and varied workforce has the flexibility and experience to undertake projects ranging from minor repairs and maintenance to major refurbishments, and construction works.

Mezzanine floors from Redifloor utilise redundant vertical space and are cost effective compared to extending a building. We offer a full service, from initial planning and design through to installation and commissioning.

Redirack pallet racking has a wide range of accessories that make it a highly versatile storage medium. Customers have stored car bodies, reels of paper and rolls of carpet successfully. Here a ski stockist illustrates another solution.

Mezzanine floors are used to store goods or create additional sales, work or production areas. They come with a wide variety of options including staircases, industrial or retail balustrades, parcel chutes, and pallet gates.
