However, non-standard and corporate colours are available on request.

SIGMA FEATURES

Sigma is a modular, demountable panel system that can be used for a variety of applications within a warehouse or factory environment.

It is ideal for enclosing working areas where appearance is important but without the extra cost of a double skin system.

Sigma is also widely used for enclosing paint lines and coating furnaces, and allows easy access for maintenance.

In a multi-tiered application, it can be used as factory or warehouse division for as security, dustproofing and environment control.

Other applications include perimeter guarding to automated machinery, robots, conveyors, and for other automated processes.

A drop down hatch can be integrated into the system and is ideal for use in storage and logistics areas.

Sigma can be cut to accommodate an existing structure, providing an aesthetic finish.

Various mesh types and sizes are available to suit your requirements.
